

# GREATER RICHMOND COLLEGE READY TO OPEN FIREPROOF PLANT AT WESTHAMPTON

## RICHMOND COLLEGE TO OPEN IN NEW HOME

**Has Erected \$1,000,000 Fireproof Plant in Westhampton Park.**

### IS THOROUGHLY UP-TO-DATE

New Co-ordinate College for Women Occupies One of the Handsomest Educational Buildings in This Country—Preparing Grounds.

Greater Richmond College—the only educational institution in the South—will begin its first session next month in its handsome group of buildings, erected at a cost of more than \$1,000,000, near Westhampton. The beautiful structures have been accepted by the college officials, and are now being cleaned and put in shape for occupancy. College work will begin on September 17, with the brightest outlook in the history of the old school, which for eighty-two years has been a factor in the educational development of the city and state.

Eighty buildings and the general equipment have been added to help Richmond College raise its standard in order to strengthen the college for men and to make better provision for the collegiate education of women. To-day the results can be seen in the magnificence of the buildings and in the great financial gain in all Westhampton. In addition to money for the college, the Richmond College Corporation met the general education fund, and to date the sum of \$50,000 has been sent on the building. The college has been set up on the highest ideals and the school will open with the handsomest and most costly plant in the South, as well as the most beautiful surroundings, which as yet have not received the full development of which they are susceptible.

### GROUND WAS FIRST BROKEN IN MAY, 1911

A ground was broken in May, 1911, for the first building, and since that date many other structures—other buildings under two roofs have been erected. An enormous concrete stadium has been constructed, and a central heating and power-house built. The work was done by subcontractors, under the personal supervision of the building committee, and it was done so it increased nothing but the whole institution free of debt at the outset.

All of the buildings are of dark red brick with stone trimmings, and the signature in the style of architecture was followed on the entire group. The framework is of steel, set in concrete, and the exterior is covered with smooth gypsum. The gutter system of the structures, hollow tile, was used for gutters. Window frames are of concrete stone and all sash are bronze.

The decoration of the whole group is of the most artistic nature, which the officers will be located, as well as the principal reception room for male students. There will be two dormitory buildings, or, in reality, nine nonconfining buildings under two roofs. This system was adopted from the plan followed by the University of Pennsylvania, and while giving maximum room for the men, they are grouped together to give space, and to conform to the much structures of the state of uniformity.

**DEATH, SAFETY AND  
COMFORT PROVIDED FOR**

The health, safety, and comfort of the student have been consulted in this class of buildings inclosed. The halls are 26' 6" wide by 14 feet. They follow double rooms slightly larger, the suites consisting of bedroom and study. The buildings are heated with water and are electrically lighted, and there is no connection with the main office by electric stairs. The public toilets, finished in marble, are numerous and conveniently placed throughout the dormitories, as are bathrooms and drinking fountains. The water system consists of two large elevated tanks, and power-house has been centrally located.

The whole group is situated on grounds covering 288 acres, including an eight-acre lake. Toward the south can be seen the falls of the James River.

Greater Richmond College is a co-operative union of five institutions, among them Richmond College for men only, and Westhampton College for women only. For fifteen years Richmond College admitted women to classes with the boys, which was unusual for that period.

Answer. "For fifteen years Richmond College admitted women to classes with the boys, which was unusual for that period."

Nowhere else in the country do you find the new ways, and you'll forget you ever heard of them.

"It's the New Way, and You'll Forget You Ever Heard of It."

"I drop a puff in 2 seconds; corn shrivels comes clean off." That's the marvelous story of "GETS-IT," the new-plan corn cue. Nothing can be simpler for the cure of corns—and it's the new way, and you'll forget you ever heard of it.

Use "Gets-It," Corns Shrivel, Vanish!

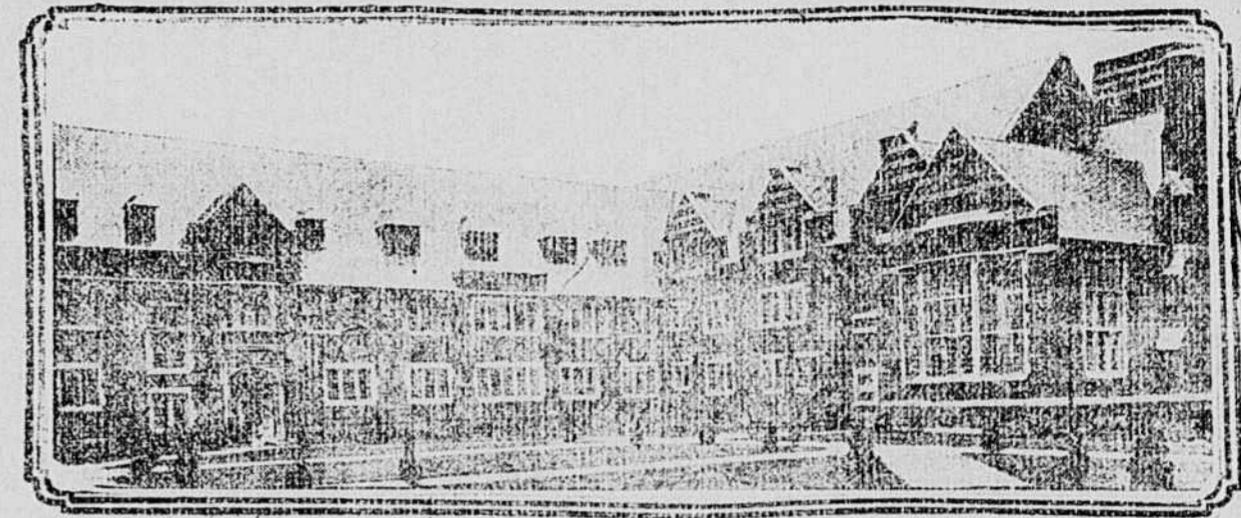

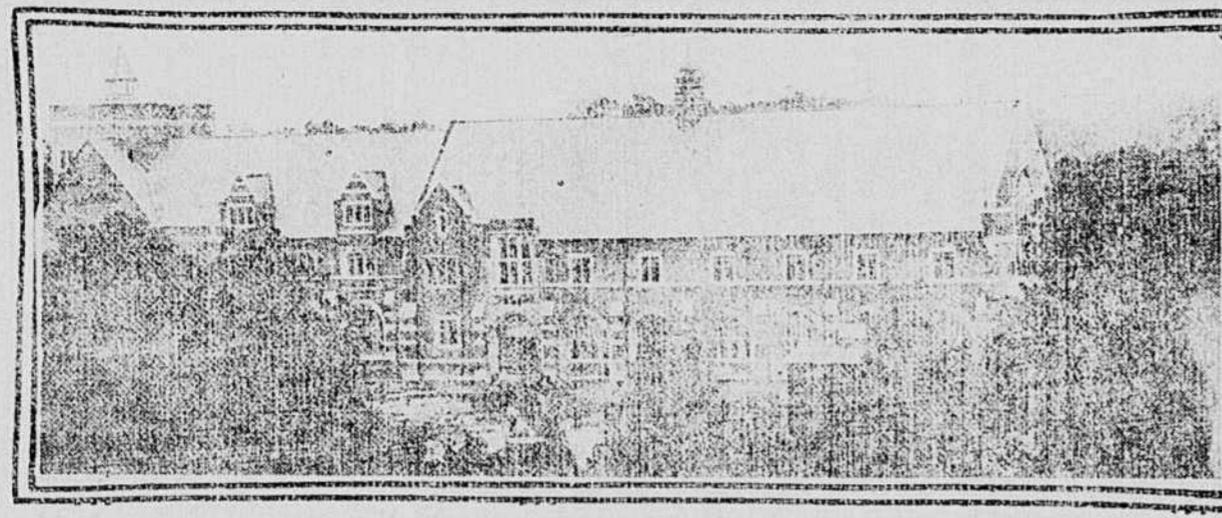

Never fails! That's why millions of people are using "GETS-IT" to-day, and throwing away their fuzzy plasters and sticky ointments that only bound around the toe and choke it to pain by pressing either on or around the corn. There is nothing to stick to your stocking, nothing to cause inflammation or irritation, nothing to bind the toe. Nowhere else can you buy a corns-remover that is as safe and effective as this.

Answer. "Yes, I believe that the reason you won't like three-grain sulphur tablets is because they contain astringent drugs which eliminate waste material from your body. These tablets purify the blood and improve the health by

calming, ward, or toning."

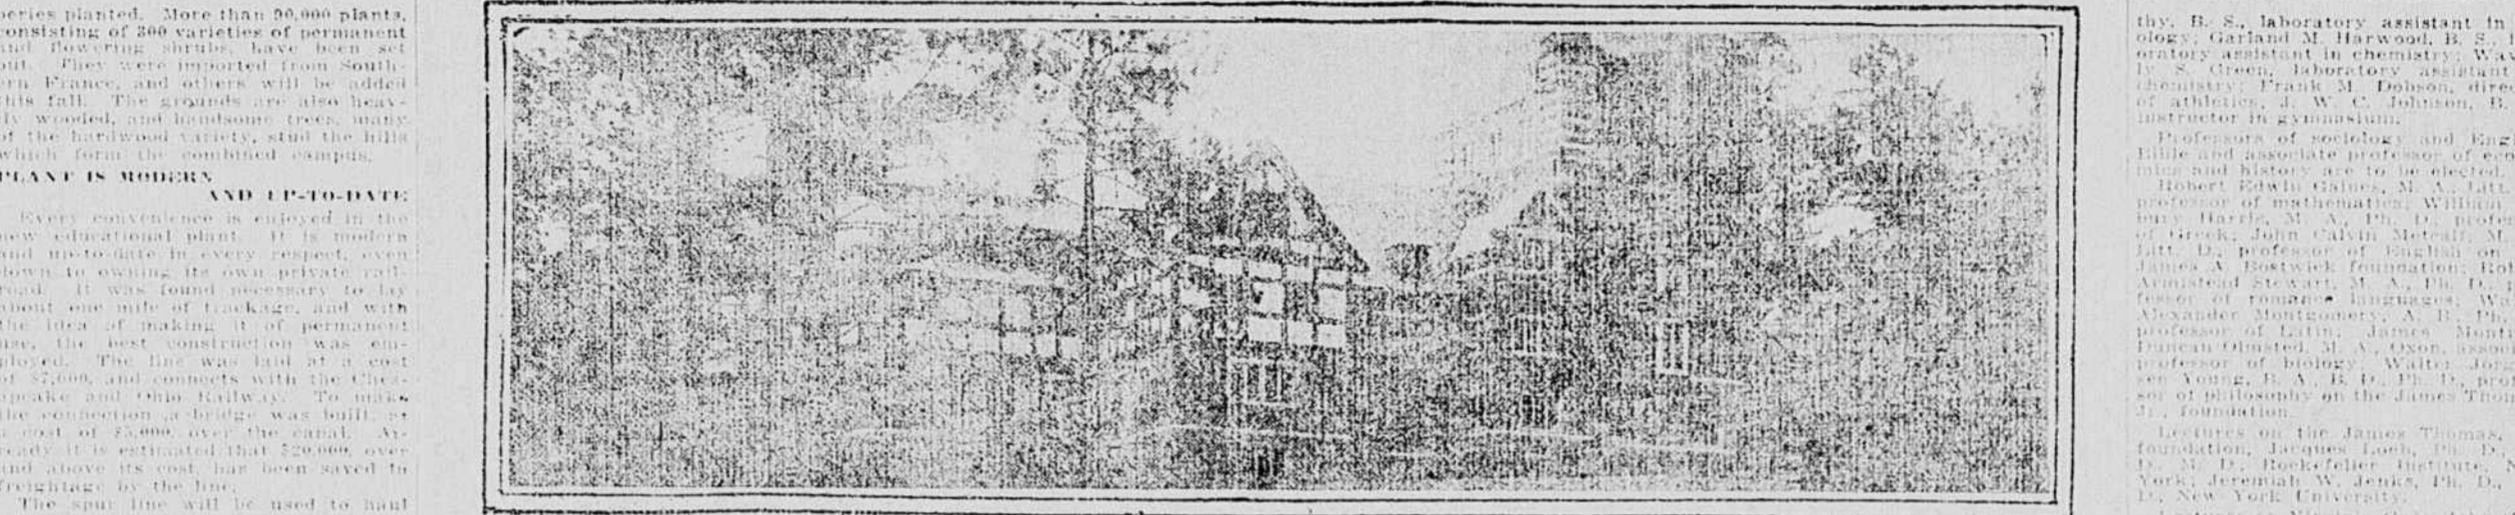

"GETS-IT" is sold by drugists everywhere, 25¢ a bottle, or ten cents a tablet.

bushes planted. More than 50,000 plants, consisting of 200 varieties of permanent and flowering shrubs, have been set out. They were imported from Southern France, and others will be added this fall. The grounds are also heavily forested, and the woods consist of the hardwood variety, and the hills which form the combined campus.

### PLANT IS MODERN AND UP-TO-DATE

Every convenience is enjoyed in the new educational plant. It is modern and up-to-date in every respect, even down to owning its own private railway. It was found necessary to lay out one mile of track, and with the idea of making it of permanent use, the best construction was employed. The line was laid at a cost of \$7,000, and connects with the Chesapeake and Ohio Railway. To make the connection, a bridge was built at a cost of \$3,000 over the canal. As much as \$40,000 has been saved in freightage by the line.

The spur line will be used to haul coal and other supplies to the central heating plant, which has been erected at a cost of \$30,000. This plant contains many features of interest, among the few places in the country. The easiest coal is brought into the building hoisted in bulk to the bin from which it automatically feeds into the furnace without being handled at all.

In the heating plant steam will be generated by burning coal and pumped with forced hot water through the buildings, thus being the modern and most economical system of heating. Plans have been made to have a laundry located in the plant.

City water will be used throughout the college, the eight-inch main connected with the fire hydrants to prevent the possibility of a water famine in case of breakage, or any other cause of an insufficient reservoir.

Aging, two-story, all-wood dormitory, containing 200 beds, will be erected. Three artesian wells, large enough to supply 2,000 persons, have been installed. A better fireproof system of heating will be installed, the pipes being covered with asbestos, and the pipes are electrically insulated, and water pipes are electrically insulated, and when connected with the main office by electric stairs, the public toilets finished in marble are numerous and conveniently placed throughout the dormitories, as are bathrooms and drinking fountains. The water system consists of two large elevated tanks, and power-house has been centrally located.

## The Doctor's Advice by Dr. Lewis Behor

This question answered below are printed in the hope that the symptoms or diseases are given and the answers will apply in any case of similar nature.

Those wishing further advice, free, may address Dr. Lewis Behor, Baker College Clinic, Elgin, Ill., or Dept. D, enclosing self-addressed stamped envelope for reply. Full name and address must be given but only initials and family name will be used in answers. The prescription can be filled at any well-known drug store. Any druggist can order of wholesaler.

Acting on the liver, kidneys and bowels, again in sealed times with full directions.

John C. L. writes: "I find my natural strength and nervous system failing, and am not getting along very well. My food and rest seem to benefit me greatly. Am weak, listless and unable to perform the duties which I had in earlier life, while my ambition for work and pleasure is slowly going."

Answer. I think a powerful, harmless tonic and nutritive medicine will reduce the fatigued condition, helping to restore assimilation and elimination by invigorating the nervous system. Obtain three-grain cod-liver tablets, packed in sealed tins, and take as per directions accompanying.

Miss Bertie L. asks: "What remedy do you recommend to reduce about thirty pounds?" I would suggest, if possible, a morning and night diet of cereal, and ladies are swollen. Sometimes I have chills and feel weak and tired most of the time."

Answer. Your eliminating organs are likely to become enlarged. Take a laxative, begin taking bathwater tablets at once. Get them in sealed tins with full directions. Not too much reduction.

Mrs. M. D. asks: "Please relieve me of coated tongue, red heart, headache, constipation and general ill-health."

Answer. If habitually constipated, you should take three-grain sulphur tablets, not laxatives, which remove the organs which eliminate waste material from your body. These tablets purify the blood and improve the health by

### Is Your Motor or "Self Starter" Out of Repair?

We specialize in repairing motors and "self-starters," and if yours is out of order.
